

What is the Learning Assignment Tool (LAT)?

The Learning Assignment Tool (LAT) is an administrator tool in Cornerstone Learning that allows you to create, schedule, and manage learning assignments so training can be delivered to users, organizational units (OUs), and groups.

Core Purpose and Capabilities

Create learning assignments: Set up standard (one-time) and dynamic (continuous) assignments through a guided, five-step workflow (Setup, Options, Schedule, Users, Confirm).

Deliver training: Assign curricula, courses, materials, assessments, and other learning objects directly to user transcripts, including compliance and recurring training.

Target specific audiences: Use user and OU criteria, groups, and other filters to control who receives each assignment.

Control processing and behavior: Configure options such as dynamic removal and reassignment, recurrence, processing start time, training start date, email notifications, and prerequisite enforcement.

Track and manage assignments: Use the Manage Learning Assignments page and the Assignment Summary page to monitor progress, adjust settings, and, for standard assignments, remove assigned training from transcripts when appropriate.

Support assessments: Assign published learning assessments to user transcripts via standard learning assignments, with specific limitations (e.g., no due dates or recurring configuration for assessment assignments).

How Administrators Access and Use LAT

Access via Admin > Tools > Learning > Assignment Tool, which opens the Manage Learning Assignments page (the LAT landing page).

Click Create Assignment to launch the five-step workflow where you:

Choose assignment type (standard or dynamic) and add training.

Configure rollout options (statuses like Assigned/Approved/Registered, dynamic removal, email settings, prerequisites, recurrence).

Schedule processing and due dates.

Define user criteria and availability.
